EDUCATION

Bulacan State University

San Jose del Monte, Bulacan

B.S. in Information Technology

Graduated, July 2025

- **Concentrations:** Web and Mobile Development
- **Dean's List:** 2021-2025
- **Related Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Web Development, Mobile Development, Database Management

EXPERIENCE

Ramcar Technologies Inc.

Sta. Maria, Bulacan

Web Developer/Data Analyst Intern

Feb 2025 – May 2025

- Developed an interactive dashboard web application using **Streamlit** to visualize solar energy data from both **inside and outside the Sta. Maria Industrial Park (SMIP)**
- Conducted data backtracking and extraction to identify and correct inconsistencies in historical solar data
- Developed a sample Streamlit web application integrated with FusionSolar API to fetch real-time solar energy data, and demonstrated its functionality and integration process to the supervisor

PROJECTS

Web-based Accounting System

San Jose del Monte, Bulacan

Team Leader

Sept 2024 – Dec 2024

- Led a team of 5 in creating a web-based accounting system, serving as the primary full-stack developer and guiding documentation and testing efforts.
- Developed both front-end and back-end using HTML/CSS, JavaScript, Node.js, Bootstrap, PHP, and MySQL to ensure a responsive and secure platform
- Implemented key features including:
 - Dashboard with financial insights
 - User authentication with role-based access
 - Payroll and inventory management
 - Income/Expense tracking
 - Ordering system for cashier operations

CostIQ — Business Costing Application (Solo Developer)

San Jose del Monte, Bulacan

- Developing a full-stack costing and pricing tool for micro/small business owners to make data-driven pricing decisions
- Built dynamic product cost computation per batch and per unit covering direct materials, labor, and overhead expenses
- Implemented financial metrics including break-even analysis, ROI, margin scenario modeling, and interactive pricing guides
- Designed a what-if income planner that calculates production targets and timelines based on user-defined profit goals and daily batch capacity.
- Secured data access using JWT-based authentication and per-user row filtering via a **created_by** column, and rate limiting on sensitive endpoints to prevent abuse
- Architecting for SaaS deployment with multi-tenant data isolation and planned subscription-based access tiers.
- **Stack:** React.js, Tailwind CSS, Node.js, Express.js, PostgreSQL, Headless UI, Recharts, node-cron, Cloudinary

TECHNICAL SKILLS

- **Languages:** JavaScript, Python
- **Data/Analytics:** Streamlit, Data Visualization, Financial Modeling
- **Frontend:** React.js, Tailwind CSS, Bootstrap
- **Backend:** Node.js, Express.js, PHP
- **Database:** PostgreSQL, MySQL
- **Tools:** Git, Cloudinary, REST APIs, JWT Auth
